## Addition of Decimals Worksheet (Adding Decimal numbers with 3 digits or more)

Questions (show all working)

1) Taisy had \$ 3.45 in her piggy bank.

A neighbour called Eega Jennings gave her another \$ 2.45 for doing odd jobs.

How much money does Taisy have now?

---

2) Kady and Julianner were weeding their family's orchard . They each had a tub into which they threw the weeds they pulled out. At the end of the job, they weighed the tubs. Kady had 2.25 kilograms of weeds in his bucket. Not bad! Julianner's tub of weeds weighed 3.55 kilograms.

What was the total weight of both Kady's and Julianner's bucket of weeds?

---

3) Lilly-Becks discovered that the price of aluminium cans had reached a great price – better than it had been for two years! She called her friend, May , and told her the GOOD NEWS!  
Both girls had been collecting aluminium cans for some time. Now was the time they would cash in on their efforts. They got their parents to take them down to the recycling centre. The weight of May's cans was 33.645 kg. Lilly-Becks's cans weighed in at 37.97 kg! BONUS! More cash money!

Now, putting all the excitement to one side for a moment, what was the total combined weight of the cans?

---

4) Aarbamil Cadweer was about to start mowing the lawns when he realised the lawn mower was completely empty.  
Aarbamil Cadweer went to the garden shed and found the fuel can – only to discover it was almost empty. Judging by the measurement gauge on the inside of the plastic container, there was about 0.45 litres of fuel remaining. Aarbamil Cadweer quickly hopped on his bike and rode to the gas station just over a kilometre from his house. When he arrived at the gas station, Aarbamil Cadweer realised he didn't have much money – just several coins. However, he had enough money to purchase another 2.45 litres of lawnmower fuel.

In total, how much lawn mower fuel did Aarbamil Cadweer now have?
