Subtraction Worksheet (Subtracting numbers with 4 digits or more)

Questions (show all working)

1) Besette had \$ 3569. She spent \$ 1442.

How much money does Besette have left?

2) Davo was cooking some lovely buns . He needed 1521 grams of flour .

When he found the container of flour his family kept in the pantry, he found there was 2702 grams of flour.

After Davo had taken the flour he needed to make the buns, how much flour was left in the container (assuming he didn't spill any!)?

3) Trudy loved pet frogs . She had two pet frogs which she enjoyed caring for. Trudy and her dad decided to make a new home for her pet frogs.

Trudy got a piece of wood for her dad to cut. The wood was 2883 mm in length.

Trudy's dad cut off 2012 mm, which he would use to build the new home. This piece of wood would be the length of the new home. Cool!

What was the length of the piece of wood that was left over - the piece of wood which would NOT be the length of the new home for the pet frogs?

4) Milst enjoyed wandering along the Munttilly Stepway, which ran along the banks of Eeenox Stream, luxuriating in the dappled warmth of the twin suns, Sosmeel and Fefmaal.

One of the reasons Milst enjoyed taking regular walks alongside the river was that he could collect dentu cusps , which grew on the river banks. For some reason, the dentu cusps which grew where Milst took his leisurely strolls were of the most coveted hues and shapes. In total, Milst had collected 29654 dentu cusps by the time he reached his thirteenth birthday. As a special birthday treat for himself, Milst sold 23039 dentu cusps so he could buy himself a new set of Tamboon boot spurs.

How many dentu cusps did Milst have left after selling the dentu cusps to buy the boots?
