Subtraction Worksheet (Subtracting numbers with 4 digits or more)

Questions (show all working)

1) Cari had \$ 3834. She spent \$ 845.

How much money does Cari have left?

2) Dwayno was cooking up a super-duper batch of buns . He needed 1866 grams of flour . When he found the container of flour his family kept in the pantry, he found there was 3537 grams of flour.

After Dwayno had taken the flour he needed to make the buns, how much flour was left in the container (assuming he didn't spill any!)?

3) Veronica loved hamsters . She had two hamsters which she enjoyed caring for. Veronica and her dad decided to make a new home for her hamsters. Veronica got a piece of wood for her dad to cut. The wood was 2460 mm in length. Veronica's dad cut off 1874 mm, which he would use to build the new home. This piece of wood would be the length of the new home. Cool!

What was the length of the piece of wood that was left over - the piece of wood which would NOT be the length of the new home for the hamsters?

4) Crasneer enjoyed wandering along the Liffestine Travelway, which ran along the banks of Unsillary Watercourse, luxuriating in the dappled warmth of the twin suns, Sesmaal and Fifmaal.

One of the reasons Crasneer enjoyed taking regular walks alongside the river was that he could collect pinto stones , which grew on the river banks. For some reason, the pinto stones which grew where Crasneer took his leisurely strolls were of the most coveted hues and shapes.

In total, Crasneer had collected 23142 pinto stones by the time he reached his thirteenth birthday. As a special birthday treat for himself, Crasneer sold 14778 pinto stones so he could buy himself a new set of Tamboon boot spurs.

How many pinto stones did Crasneer have left after selling the pinto stones to buy the boots?
